

Supporting a novel approach to vehicle manufacturing

Case study overview

Electric platform leader REE Automotive created an innovative modular platform concept for electric vehicles. HORIBA MIRA was engaged to provide full engineering and test support to the project, accelerating the platform's journey from concept to working prototypes.

The requirements for the project were far-reaching.

Engineering team deployed: Flexible engineering support, with up to 50 personnel working on the project.

Engineers from HORIBA MIRA were embedded in a number of REE Automotive's delivery teams, supporting aspects such as attribute leadership, design, simulation, project management, certification, cybersecurity and functional safety.
